- Put in batteries, the instrument switches to continuous operation
Battery capacity is monitored
If the battery symbol appears in the display, you can still measure in continuous operation:
- approx. 14 days
- Settings are not lost when battery is changed.
- Donot use the device in a polluted environment (heavily dusty, oil, foreign matter, volatile chemi-cals).

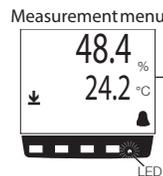

- You can set an alarm (display) which is triggered when the measured limit values are excee-

Exceeding/under-shooting the activated alarm limit values

Note
If the activated alarm limit value (displayed with ▲) has been exceeded or undershot, the following appears in the display
- ▼ if limit value is undershot
- ▲ if limit value is exceeded and the LED flashes.

Flashing LED until "SET" is confirmed.

Note

The exceeded or undershot limit value is retained and is shown as MIN/MAX value in the MODE menu. Reset of MIN/MAX values may have to be carried out.
