A. INTRODUCTION

1. Congratulations!!

Thank you for purchasing TPI brand products. The meter is easy to use and is built to last. It is backed by a 3 year limited warranty. Please remember to complete and return your product warranty registration card.

2. Product Description

The 135 is a hand held manual ranging DMM. It features extra large numerals on the LCD, and Data Hold for all functions and ranges. The 135 is an affordable choice offering measurements in all of the basic electrical functions.

The 135 comes complete with the following:

135 Instrument Rubber Boot Test Lead Set Instruction Manual Battery

3. EC Declaration of Conformity

This is to certify that model 135 conforms to the protection requirements of the council directive 89/336/EEC, in the approximation of laws of the member states relating to Electromagnetic compatibility and 73/23/EEC, The Low Voltage Directive by application of the following standards:

EN 50081-1 1992 Emissions Standard EN 50082-1 1992 Immunity Standard EN61010-1 1993 Safety Standard EN61010-2-031 1995 Safety Standard

To ensure conformity with these standards, this instrument must be operated in accordance with the instructions and specifications given in this manual.

CAUTION:

Even though this instrument complies with the immunity standards, the accuracy can be affected by strong radio emissions not covered in the above standards. Sources such as hand held radio transceivers, radio and TV transmitters, vehicle radios and cellular phones generate electromagnetic radiation that could be induced into the test leads of this instrument. Care should be taken to avoid such situations or alternatively, check to make sure that the instrument is not being influenced by these emissions.

B. SAFETY CONSIDERATIONS

⚠ WARNING: Please follow manufacturers test procedures whenever possible. Do not attempt to measure unknown voltages or components until a complete understanding of the circuit is obtained.

GENERAL GUIDELINES

ALWAYS

- Test the 135 before using it to make sure it is operating properly.
- Inspect the test leads before using to make sure there are no breaks or shorts.
- · Double check all connections before testing.
- Have someone check on you periodically if working alone.
- Have a complete understanding of circuit being measured.
- Disconnect power to circuit, then connect test leads to the 135, then to circuit being measured.

NEVER

- · Attempt to measure unknown high voltages.
- Attempt to measure current with the meter in parallel to the circuit.
- Connect the test leads to a live circuit before setting up the instrument.
- Touch any exposed metal part of the test lead assembly.

C. TECHNICAL DATA

1. Features and Benefits

Safety Meets CE and IEC 1010 requirements.

UL Listed to U.S. and Canadian Safety

Standards.

Large LCD Easy to read at all angles and the

majority of lighting levels. 4000 Count.

Rubber Boot Added protection when the instrument

is dropped. (135NB does not include

boot.)

Multi-function Measure all electrical characteristics

with one meter.

2. Product Applications

Perform the following tests and/or measurements with the TPI 135 and the appropriate function:

HVAC/R

FUNCTION

DCmV

• Thermocouples in furnaces or gas

applications.

• Heat anticipator current in thermostats.

ACV • Line voltage.

ACV or DCV • Control circuit voltage.

CAPMotor start and run capacitance.DCµAFlame safeguard control current.

• Heating element resistance (continuity).

OHMSCompressor winding resistance.OHMSContactor and relay coil resistance.

OHMS • Continuity of wiring.

• Temperature with optional temperature

adapter (A310).

ELECTRICAL

FUNCTION

ACV • Measure line voltage.

• Continuity of circuit breakers.

• Voltage of direct drive DC motors.

3. Specifications

CAT III - 1000V CAT III - 600V

Pollution Degree 2

a. DCV					
Range	Resolution	Accuracy	Impedance		
400mV	0.1mV	±0.5% of reading,	$10 \mathrm{M}\Omega$		
4V	0.001V	±2 digits			
40V	0.01V				
400V	0.1V				
1000V	1V				

b. ACV (60Hz to 400Hz)				
Range	Resolution	Accuracy	Impedance	
400mV	0.1mV	±0.8% of reading, ±3 digits	10ΜΩ	
4V	0.001V	•		
40V	0.01V			
400V	0.1V			
750V	1V			

c. DCA			
Range	Resolution	Accuracy	Overload Protection
<u>40μ</u> Α	0.1μΑ	±0.5% of reading,	Fuse*
<u>400μ</u> Α	0.001mA	±3 digits	F600V, 2A, 31CM
40mA	0.01mA		
400mA	0.1mA		
2A	0.1mA		
10A	0.01A	±1.2% of reading,	Fuse*
		±3 digit	F600V, 10A, 31CM

*Warning: Use only correct size, voltage and current rated fuses.

Test Leads: Use only correct type and overvoltage category rating.

d. ACA			
Range	Resolution	Accuracy	Overload Protection
<u>40μ</u> Α	0.1μΑ	±0.8% of reading,	Fuse*
400μA	0.001mA	±3 digits	F600V, 2A, 31CM
40mA	0.01mA		
400mA	0.1mA		
2A	0.001A		
10A	0.01A	± 3% of reading, ± 7 digits	Fuse* F600V, 10A, 31CM

e. OHN	I (Resistar	(ce,Ω)	
Range	Resolution	Accuracy	Overload Protection
400Ω	0.1Ω	±0. 75% of reading,	600V DC or
4kΩ	0.001kΩ	±3 digits	AC Peak
40kΩ	0.01kΩ		
400kΩ	0.1kΩ		
4ΜΩ	0.001MΩ		
40MΩ	0.01MΩ	±1% of reading, ±3 digits	

f. Diode Test Test Voltage Max Test Current		
		Over Load Protection
<u>3</u> V	Approx. 1mA	600 V DC or Peak AC

g. Continuity Buzzer		
Test Voltage Threshold		Over Load Protection
3V	<100Ω	600 V DC or Peak AC

h. Capacitance				
Range	Resolution	Accuracy		Overload Protection
400μF	0.01µF	±2% of rea	ading, ±3 digits	600V DC or
20000μF	0.1μF	±3% of rea	ading, ±5 digits	Peak AC

i. General S	Specifications
Power Supply	9 Volt Battery
Battery Life	560 hrs. Alkaline
Size (H x L x W)	33mm x 86mm x 187m
	(1.3" x 3.4" x 7.4")
Weight	340g (12 oz)

*Warning: Use only correct size, voltage and current rated fuses.

Test Leads: Use only correct type and overvoltage category rating.

D. MEASUREMENT TECHNIQUES

1. Controls and Functions:

Push Buttons

Turns the 135 on and off.

Data-H Activates the Data Hold function.

Rotary Switch

DCV Used for measurement of DC Volts. Select the best range for the voltage to be measured.

ACV Used for measurement of AC Volts. Select the best range for the voltage to be measured.

DCA Used for measurement of DC Amps. Select the best range for the current to be measured.

ACA Used for measurement of AC Amps. Select the best range for the current to be measured.

OHM Used for measurement of Resistance, Diode Test and Continuity Buzzer. Select the best range for the resistance to be measured.

CAP Used for measurement of Capacitance Select the best range for the capacitance to be measured.

Input Jacks

A Red test lead connection for current measurements on the 2 and 10 ACA and DCA functions.

He mAμA Red test lead connection for current measurement on the mA and μA DCA and ACA functions.

COM Black test lead connection for all functions.

VΩ→ Red test lead connection for OHM, DCV and ACV functions.

2. Step by Step Procedures:

a. Measuring DC Volts

CAUTION!

Do not attempt to make a voltage measurement if a test lead is plugged in the A or µmA input jack. Instrument damage and/or personal injury may result.

⚠ WARNING!

Do not attempt to make a voltage measurement of more than 1000V or of a voltage level that is unknown.

Instrument set-up:					
FUNCTION	BLACK Test lead	RED Test lead	MINIMUM Reading	MAXIMUM Reading	
DCV	COM	VΩ ->	0.1mV	1000V	

Measurement Procedure:

- 1. Disconnect power to circuit to be measured.
- 2. Plug black test lead into the **COM** input jack.
- 3 Plug red test lead into $\mathbf{V}\Omega \rightarrow \mathbf{M}$ input jack.
- Set the rotary switch on the 135 to the desired range in the **DCV** function depending on the voltage to be measured.
- 5. Connect test leads to circuit to be measured.
- 6. Reconnect power to circuit to be measured.
- 7. Read the voltage on the 135.

Application Notes

When measuring DC Voltage of a battery, the most accurate reading can be attained by testing the battery under load. To accomplish this, follow steps 1 through 4 above and the following (with the battery in holder and device turned on):

- Connect the red test lead from the meter to the positive (+) terminal of the battery.
- Connect the black test lead to the negative (-) terminal of the battery.
- Reconnect power to the circuit and read the voltage on the 135.

b. Measuring AC Volts

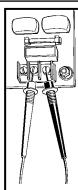

CAUTION!

Do not attempt to make a voltage measurement if a test lead is plugged in the A or µmA input jack. Instrument damage and/or personal injury may result.

△ <u>WARNING!</u>

Do not attempt to make a voltage measurement of more than 1000V or of a voltage level that is unknown.

Instrument set-up:					
FUNCTION		RED	MINIMUM	MAXIMUM	
	TEST LEAD	TEST LEAD	READING	READING	
ACV	COM	VΩ -N	0.1mV	750V	

Application Notes

Disconnect power from the terminal block, find the fuse or circuit breaker that controls the block and turn it off.

Set up the meter following the steps under "Measurement Procedure" on page 13. Then proceed with the following:

- Connect the red test lead to the hot side of the block and the black lead to the neutral side of the block. Reconnect power to the block and read the voltage on the meter. The reading should be approximately 110V to 130V.
- Disconnect power from the block and move the red wire to ground. Reconnect power to the block and read the voltage on the meter. Typically less than 20V should exist from neutral to ground. If 110V or above exists, the block may be wired incorrectly.

b. Measuring AC Volts (cont.)

Measurement Procedure:

- 1. Disconnect power to circuit to be measured.
- 2. Plug black test lead into COM input jack.
- 3. Plug red test lead into $\mathbf{V}\Omega \rightarrow \mathbf{I}$ input jack.
- Set the rotary switch on the 135 to the desired range in the ACV function depending on the voltage to be measured.
- 5. Connect test leads to circuit to be measured.
- 6. Reconnect power to circuit to be measured.
- 7. Read the voltage on the 135.

c. Measuring DC Amps

CAUTION!

Do not attempt to make a current measurement with the test leads connected in parallel with the circuit to be tested. Test leads must be connected in series with the circuit.

⚠ WARNING!

Do not attempt to make a current measurement of circuits with more than 600V present. Instrument damage and/or personal injury may result.

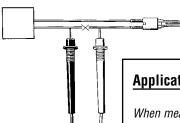

Instrument set-up:				
FUNCTION	BLACK Test lead	RED Test lead	MINIMUM Reading	MAXIMUM READING
DCA	COM	mAμA	0.1μΑ	1.999A
(up to 2mA	range)			
DCA (10A range	COM only)	А	0.01A	10.00A

c. Measuring DC Amps (cont.)

Measurement Procedure:

- Disconnect power to circuit to be measured.
- Plug black test lead into the COM input jack.
- Plug red test lead into mAµA or A input jack depending on value of current to be measured.
- Set the rotary switch on the 135 to the desired range in the DCA function depending on the current to be measured and the input jack the red test lead is inserted into.
- 5. Connect test leads in series to circuit to be measured.
- Reconnect power to circuit to be measured.
- 7. Read the current on the 135.

Application Notes

When measuring the DC current of a flame controller, follow the steps under "Measurement Procedure" above and then proceed with the following:

- Set up the meter for making a μA measurement.
- Connect the meter to the flame controller lead by opening the circuit and inserting the leads in series with the circuit as shown in the picture above.

d. Measuring AC Amps

CAUTION!

Do not attempt to make a current measurement with the test leads connected in parallel with the circuit to be tested. Test leads must be connected in series with the circuit.

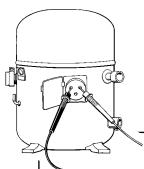

Do not attempt to make a current measurement of circuits with more than 600V present. Instrument damage and/or personal injury may result.

Instrume	nt set-up:			
FUNCTION	BLACK TEST LEAD	RED Test lead	MINIMUM Reading	MAXIMUM READING
ACA	COM	mAμA	0.1μΑ	1.999A
(up to 2A ran	ge)			
ACA	COM	Α	0.01A	10.00A
(10A range o	nly)			

Measurement Procedure:

- 1. Disconnect power to circuit to be measured.
- 2. Plug black test lead into the **COM** input jack.
- Plug red test lead into mAµA or A input jack depending on value of current to be measured.
- Set the rotary switch on the 135 to the desired range in the ACA function depending on the current to be measured and the input jack the red test lead is inserted into.
- 5. Connect the test leads in series to the circuit to be measured.
- 6. Reconnect power to circuit to be measured.
- 7. Read the current on the 135.

Application Notes

When measuring resistance of a motor, make sure the power is disconnected prior to testing.

Set up the meter following steps under "Measurement Procedure" on page 17, and then proceed with the following:

- Connect the red test lead to one power input line of the motor and the black test lead to the other power input line of the motor. In most applications if the reading is OFL, the motor winding is open.
- Connect the red test lead to the frame of the motor and the black test lead to the winding. In most applications if a reading of 0 Ohms is displayed, the winding is shorted to the motor frame (ground).

e. Measuring Resistance

⚠ WARNING!

Do not attempt to make resistance measurements with circuit energized. For best results, remove the resistor completely from the circuit before attempting to measure it.

NOTE:

To make accurate low ohm measurements, short the ends of test leads together and record resistance reading. Deduct this value from actual readings.

Instrument set-up:					
FUNCTION	BLACK TEST LEAD	RED Test lead	MINIMUM READING	MAXIMUM Reading	
OHM	COM	VΩ→	0.1Ω	19.99MΩ	

Measurement Procedure:

- Disconnect power to circuit to be measured.
- Plug black test lead into the **COM** input jack.
- Plug red test lead into the $\mathbf{V}\Omega$ input jack.
- Set the rotary switch on the 135 to the desired range in the OHM function depending on the voltage to be measured.
- 5. Connect test leads to circuit to be measured.
- Read the resistance value on the 135.

Measuring Diodes

CAUTION!

Do not attempt to make diode measurements with circuit energized. The only way to accurately test a diode is to remove it completely from the circuit before attempting to measure it.

Instrument set-up:				
FUNCTION	BLACK Test lead	RED Test lead	MINIMUM Reading	MAXIMUM Reading
OHM(→)	COM	VΩ →	0.001V	2.000V

Measurement Procedure:

- Disconnect power to the circuit to be measured.
- Plug the black test lead into the **COM** input jack. 2.
- 3. Plug the red test lead into the $\mathbf{V}\Omega \rightarrow \mathbf{I}$ input jack.
- 4. Set the rotary switch on the 135 to the → position.
- 5. Connect the black test lead to the banded end of the diode and the red test lead to the non-banded end of the diode.
- Reading on the display should be between 0.3 and 0.8 volts.
- Reverse test lead connections in 5 above.
- Reading on the display should be OFL (Overload).

NOTE: If diode reads 0 in both directions, diode is shorted. If diode reads OFL in both directions, diode is open.

g. Measuring Capacitance

WARNING!

All capacitance measurements are to be made on de-energized circuits with all capacitors discharged only. Failure to de-energize and discharge capacitors before attempting to measure them could result in instrument damage and/or personal injury.

Instrument set-up:				
FUNCTION	BLACK	RED	MINIMUM	MAXIMUM
	TEST LEAD	TEST LEAD	READING	READING
46	COM	γΩι (0.01μF	20000μF

Measurement Procedure:

- Disconnect power to circuit to be measured.
- Remove capacitor from the circuit and discharge it.
- Plug black test lead into the **COM** input jack.
- Plug the red test lead into the $\mathbf{V}\Omega^{\mathbf{H}}$ input jack.
- Set the rotary switch to the function. 5.
- Connect test leads to capacitor to be measured. 6.
- Read the capacitor value on the LCD.

h. Continuity Buzzer

<u>MARNING!</u>

Do not attempt to make continuity measurements with circuit energized.

Instrument set-up:			
FUNCTION	BLACK	RED	
	TEST LEAD	TEST LEAD	
OHM(•))))	COM	VΩ →	

Measurement Procedure:

- 1. Disconnect power to the circuit to be measured.
- 2. Plug the black test lead into the COM input jack.
- 3. Plug the red test lead into the **V** → input jack.
- 4. Set the rotary switch on the 135 to the 🜒 position.
- 5. Connect the test leads to the circuit to be measured.
- 6. Listen for the buzzer to confirm continuity.

i. Data Hold

Press the **DATA-H** button at any time on any function or range to freeze the reading on the LCD display. This function is very useful when measuring in locations where the display is difficult to read.

E. ACCESSORIES*

Standard Accessories	Part No.
9V Battery	A009
Fuse, 2 Amp	A102

F. MAINTENANCE

- Battery Replacement: The 135 will display BAT when the internal 9 Volt battery needs replacement. The battery is replaced as follows:
 - Disconnect and remove all test leads from live circuits and from the 135.
 - b. Remove the 135 from its protective boot.
 - c. Remove the three screws from back of 135 housing.
 - d. Carefully pull apart front and rear instrument housing.
 - e. Remove old battery and replace it with new battery.
 - f. Reassemble instrument in reverse order from above.
- Fuse Replacement: Both of the 135 "A" and "mAµA input jacks are fuse protected. Use only Fast Blow, 600 Volt fuses with correct current ratings. Failure to do so will void all warranties. If either do not function, replace the fuse as follows:
 - Disconnect and remove all test leads from live circuits and from the 135.
 - b. Remove the 135 from its protective boot.
 - Remove the three screws from the back of the 135 housing.
 - d. Carefully pull apart the front and rear instrument housing.
 - e. Remove the old fuse(s) and replace it with new one(s).
 - f. Reassemble the instrument in reverse order from above.

3. Cleaning your 135

Use a mild detergent and slightly damp cloth to clean the surfaces of the 135.

G. TROUBLE SHOOTING GUIDE

<u>Problem</u>

Probable Causes

Does not power up

- Dead or defective battery
- Broken wire from battery snap to PCB

Won't display current readings

- Open fuse
- · Open test lead
- Improperly connected to circuit under test

All functions except ohms read high

 Very weak battery that will not turn on the low battery indicator on the LCD

ACV do not read

 Very weak battery that will not turn on the low battery indicator on the LCD

WARRANTY

Please refer to product warranty card for warranty statement.
