The portable autonomous solarimeter measures the solar irradiation for the control of photovoltaic and thermal installations on test or on site:

- **Measurement and spot check of the solar irradiation in W/m²**
(instantaneous, average, time-recording, min/max values, hold function)
- **Calculation of the energetic exposure in Wh/m²**
during the timed measures campaign*
- **Storage and saving of average values**
of power and updating the energetic exposure calculation every minutes
- **Recorded datas can be read on the display, and the graphic function allows a fast interpretation of the measure file**

SL 200

- Easy to use, for immediate informations
- Evaluation of the produced electric powers, optimum orientation of solar panels and performances follow-up.
- Analysis of sunshine on site, on short and long-term period.
- Choice and determination of the thermal or photovoltaic generators features
- Storage and saving of average values of power; update of energetic exposure calculation every minute
- Easy use of datas stored in memory,
