Bourdon tube pressure gauge, model 232.34, NS 4 1/2"

Description

This high-quality Bourdon tube pressure gauge has been designed especially for the process industry.

The use of high-quality materials and the robust design are geared to applications in the chemical and process engineering industries.

Scale ranges of 0 ... 10 to 0 ... 30,000 psi
[0 ... 0.6 to 0 ... 2,000 bar] ensure the measuring ranges required for a wide variety of applications.

WIKA manufactures and qualifies the pressure gauge in accordance with the standard ASME B40.100. As a safety function, this instrument has a solid baffle wall with blow-out back.

In the event of a failure, the operator is protected at the front side, as media or components can only be ejected via the back of the case.

The glass-fibre reinforced POCAN[®] case offers the necessary stability for reproducible measurements, even under aggressive ambient conditions.

With the model 233.34, the case filling in combination with a screwed-in restrictor enables use in applications with highly dynamic pressure loads and vibrations.
