

Constant Swing Tubing Cutters With X-CEL™ Upgrades

RIDGID Model 150 and 150-L Constant Swing Tubing Cutters, including heavy-duty versions, have been upgraded with new X-CEL™ features for enhanced productivity.

New Upgrades

- New X-CEL™ knob is bigger and more ergonomic, providing a firmer grip to cut tubing more quickly and easily.
- New X-CEL™ ball detent wheel pin allows users to change cutter wheels more quickly – No tool needed...No lost clips...change to cut copper or other tubing in seconds!

Model 150

Same Great Basic Design

Models 150 and 150-L still provide best-in-class cutting accuracy and cutter wheel life, a constant swing radius design that makes them useful in tight space applications and an enclosed feed screw to prevent clogging or jamming. In addition, a spare cutter wheel is still included in the knob for maximum uptime, and a fold-away reamer is stored in the frame for proper tube preparation.
