

No. 916 Portable Lightweight Roll Groover for Copper Tubing

Capacity:

2½" to 6" Copper tubing Types K,L,M, DWV

The RIDGID Model 916 for Copper Tubing is one of the fastest grooving machines designed specifically for use on copper tubing. This unit easily mounts to the front carriage of the RIDGID 300 Power Drive.

The 916 for Copper Tubing features:

- Specifically designed groove and drive rolls for copper (standard equipment).
- Integral Feed Handle is part of overall unit — operator not required to supply extra tool.
- Unique cam-type feed actuation — minimal effort is required by operator to form roll grooves.
- Lightweight durable design — 34 lbs. allows for easy transport, yet capable of withstanding the harshest working conditions.
- Easy serviceability — drive and groove rolls are easy to replace or install.
