

Staticide® Camouflage Wrist Straps

Essential ESD Wearables

ACL's adjustable wrist straps offer comfortable and secure personal grounding for working on electronics in EPAs. Once connected to ground, the wrist strap provides a safe path for eliminating static charges.

The flexible, elastic crochet fabric with insulative outer lining and conductive inner lining ensures full contact around the wrist. Silver conductive fibers are interwoven for maximum conductivity and minimum skin irritation. Each strap is equipped with a "flip and grip" buckle for secure adjustments. The dissipative buckle is fitted with a 4mm stud. ACL's wrist strap and cord systems offer one to five pounds of breakaway force.
