

MEASUREMENT & MONITORING IN POWER SYSTEMS

MULTIFUNCTIONAL POWER
MEASUREMENT DEVICE FOR
PANEL MOUNTING

SINEAX AM-SERIES

Panel installation devices for
a clear view into electrical
networks

The SINEAX AM-SERIES devices are compact instruments to measure and monitor in heavy current grids. They excel in display quality and intuitive operation. The devices provide a wide range of functionalities which may even be extended by optional components. They are connected to the process environment by communication interfaces, via digital I/Os, analog outputs or relays.

The devices have been designed for universal use in industrial plants, building automation or in energy distribution.

Nominal voltages of up to 690 V and measurement category CATIII can be directly connected in low voltage systems.

The universal measuring system permits the direct use of the devices in any type of grid, from single-phase mains through to 4-wire unbalanced load systems.

The AM series devices may be completely adapted to requirements on site via TFT display. Versions with an Ethernet interface permit webpage configuration without any special software.

1.800.561.8187

www.itm.com

information@itm.com

CLEAR

High resolution, colour TFT display for the pin-sharp indication of measured data

Consistently visible status information (alarms, password protection, data recording, time/date and much more)

Clear design

INTUITIVE

Easy device operation with language-specific plain text menu guidance

Topical arrangement of measured data information for quick access to desired data

Service area for maintenance and commissioning

MULTIFUNCTIONAL

Varied monitoring options via limit values and their logical linkage

Central alarm function via display or Webpage

Alarm list with plain-text information for a quick plant status overview

FLEXIBLE

Universal measuring inputs for any type of grid

Freely selectable mean value and meter measuring variables

Configurable access authorisation

SCALABLE

Combinable device version (functionality, interfaces, I/Os, power supply)

Front dimension options (96x96 or 144x144mm)

Integration as a standard object into the SMARTCOLLECT software

MEASURED VALUES

MEASURED VALUE GROUP	APPLICATION
INSTANTANEOUS VALUES U, I, IMS, P, Q, S, PF, LF, QF ... Angle between voltage phasors Min/max of instantaneous values with time stamp	Transparent monitoring of present system state Fault detection, connection check, sense of rotation check Determination of grid variable variance with time reference
EXTENDED REACTIVE POWER ANALYSIS Total reactive power, fundamental frequency, harmonics $\cos\phi$, $\tan\phi$ of fundamental frequency with min values in all quadrants	Reactive power compensation Verification of specified power factor
HARMONICS ANALYSIS (ACCORDING TO EN 61 000-4-7) Total harmonics content THD U/I and TDD I Individual harmonics U/I up to 50 th	Evaluation of the thermic load of equipment Analysis of system perturbation and consumer structure
IMBALANCE ANALYSIS Symmetrical components (positive, negative, zero sequence system) Imbalance (from symmetrical components) Deviation from U/I mean value	Equipment overload protection Fault/earth contact detection
ENERGY BALANCE ANALYSIS Meters for the demand/supply of active/reactive power, high/low tariff, meters with selectable fundamental variable Power mean values active/reactive power, demand and supply, freely definable mean values (e.g. phase power, voltage, current and much more). Mean value trends	Preparation of (internal) energy billing Determination of energy consumption versus time (load profile) for energy management or energy efficiency verification Energy consumption trend analysis for load management
OPERATING HOURS 3 operating hour counters with programmable running condition (only AM1000/AM3000) Operating hours of the device	Monitoring of service and maintenance intervals of equipments

DEMAND / SUPPLY / INDUCTIVE / CAPACITIVE

The devices of the SINEAX AM-SERIES provide information for all of the four quadrants. Depending on whether the measured system is considered from a generator or consumer perspective, the interpretation of the quadrants changes: The energy formed from active power in Quadrants I+IV can then be regarded, e.g., as supplied or demanded active energy. In order to facilitate an independent

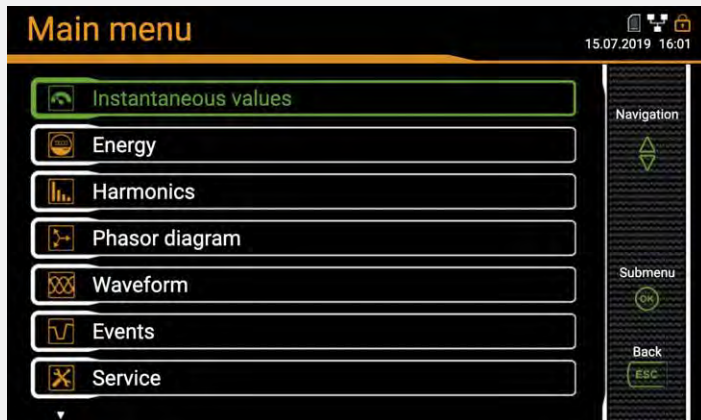

interpretation of the 4-quadrant information, the terms demand, supply as well as inductive or capacitive load are avoided in the display of data. They are expressed by stating Quadrant I, II, III or IV or a combination of these.

The energy direction may be actively switched by selecting the generator or consumer arrow system. This inverts the direction of all currents.

DISPLAY OPTIONS

MAIN MENU - accessible via ESC

The language-specific main menu arranges the available measured data in easily comprehensible groups. AM2000 and AM3000 also provide the lateral help bar with further information concerning operation. The status bar in the top right-hand corner is always available and displays the current statuses of alarm monitoring, the password protection system and data recording as well as time / date.

INSTANTANEOUS VALUES

The instantaneous values of voltages, currents, power values, power factors as well as imbalance values and their min/max values are provided either in numbers or graphically in an x/y matrix.

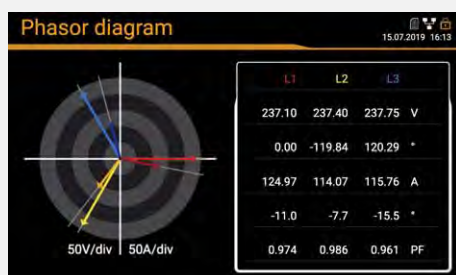

ENERGY

Contains all values required for the preparation of the energy balance, in particular, energy meters as well as mean values with progression and trend.

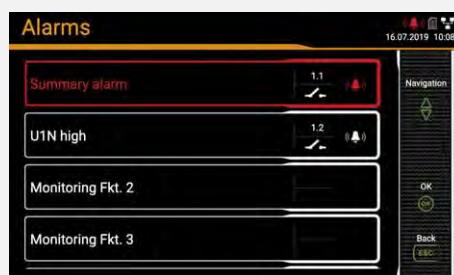

HARMONICS

Graphic representation of harmonics of all currents and voltages with TDD/THD. Reading option for individual harmonics.

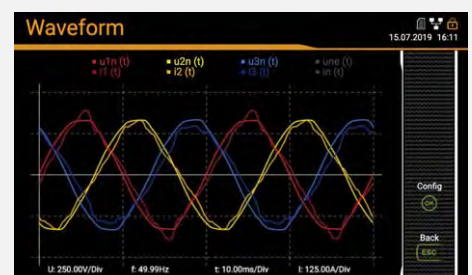

PHASOR DIAGRAM

Time-correct display of voltage and current phasors and power factors of all phases. Incorrect phase sequences false senses of rotation or reverse currents can thus be safely recognised.

ALARMS

This list displays the statuses of all monitoring functions, possibly including the status of the allocated output. The first entry is the higher-ranking collective alarm which can be reset here.

WAVEFORM

AM1000 and AM3000 displays the waveform of voltages and currents in additionally.

MONITORING AND ALARMS

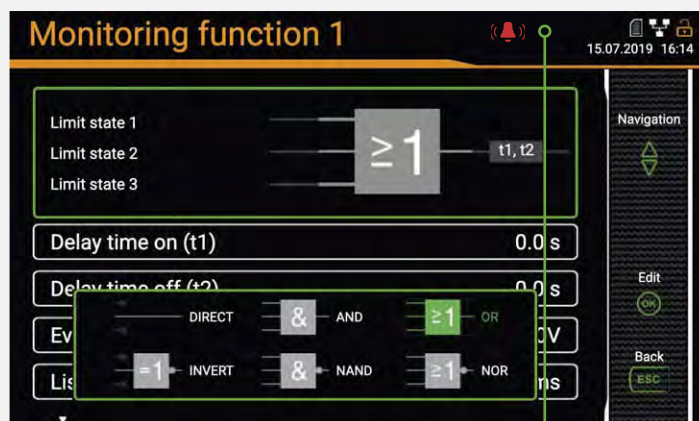

The instruments of the AM series support the on-site analysis of acquired measured data in order to initiate directly immediate or delayed measures without involving a separate control. This facilitates the protection of equipment and also monitoring of service intervals.

The following items are available:

- 12 limit values
- 8 monitoring functions with 3 inputs each
- 1 collective alarm as a combination of all monitoring functions
- 3 operating hour counters with definable running conditions

The available digital outputs may be used directly for the transmission of limit values and monitoring functions as well as the resettable collective alarm.

A text may be allocated to each monitoring function which is used both for the alarm list and the event entries in the datalogger.

DATA RECORDING

The devices may be equipped with a high-performance data logger which has the following recording options in its comprehensive version:

• PERIODIC DATA

Selectable measured values are saved in regular intervals, e.g. to acquire load profiles (intervals of 10s to 1h) or periodic meters readings (e.g. daily, weekly, monthly).

• EVENTS

A type of logbook which records the occurrence of events together with time information: Triggering and declining of monitoring functions, changes in configuration, power cuts and much more.

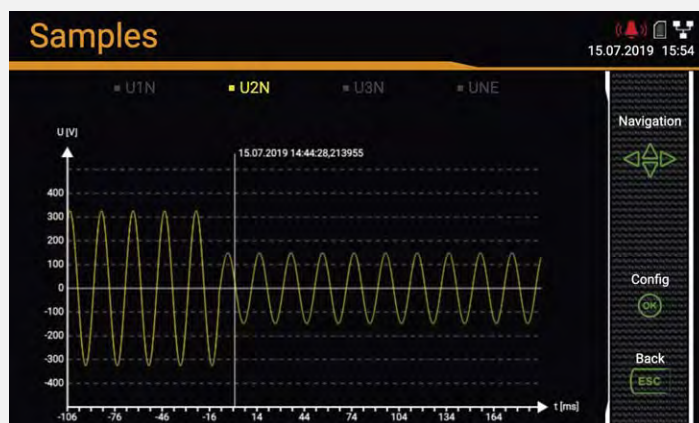

• DISTURBANCE RECORDER (AM1000 / AM3000 ONLY)

Recording of current and voltage progression in case of disturbances on basis of 1/2 cycle RMS values. In AM3000, the additional registration of the waveform during the disturbance is also possible. This type of registration corresponds to the requirements of the EN 61000-4-30 power quality standard.

The event list and the recordings of the disturbance recorder may be visualised right on the device. More extensive analyses are available via the webpage of the device.

An SD card is used as a memory element by AM2000 / AM3000.

AM1000 uses an internal memory element.

TECHNICAL DATA

INPUTS

NOMINAL CURRENT	1 ... 5 A (max. 7.5 A)
Maximum	7.5 A
Overload capacity	10 A permanent 100 A, 5x1 s, interval 300 s
NOMINAL VOLTAGE	57.7 ... 400 V _{LN} , 100 ... 693 V _{LL}
Maximum	480 V _{LN} , 832 V _{LL} (sinusoidal)
Overload capacity	480 V _{LN} , 832 V _{LL} permanent 800 V _{LN} , 1386 V _{LL} , 10x1 s, interval 10 s
Nominal frequency	42 ... 50 ... 58 Hz, 50.5 ... 60 ... 69.5 Hz
Measurement TRMS	Up to 60th harmonic

POWER SUPPLY VARIANTS

Nominal voltage	100 ... 230 V AC/DC (AM1000) 110 ... 230 V AC, 130 ... 230 V DC (AM2000/3000) 110 ... 200 V AC, 110 ... 200 V DC (AM2000/3000) 24 ... 48 V DC (AM1000/2000/3000)

UNINTERRUPTIBLE POWER SUPPLY (UPS)

Type (3,7 V)	VARTA Easy Pack EZPackL, UL listed MH16707
--------------	--

TYPES OF CONNECTION

Single phase or split phase (2-phase system)
3 or 4-wire balanced load
Only AM1000/AM3000: 3-wire balanced load [2U, 1I]
3-wire unbalanced load, Aron connection
3 or 4-wire unbalanced load
4-wire unbalanced load, Open-Y

I/O-INTERFACE

ANALOG OUTPUTS	(optional)
Linearization	Linear, kinked
Range	±20 mA (24 mA max.), bipolar
Accuracy	±0.2% of 20 mA
Burden	≤ 500 Ω (max. 10 V/20 mA)

DIGITAL INPUTS PASSIVE

Nominal voltage	12/24 V DC (30 V max.)
-----------------	------------------------

DIGITAL INPUTS ACTIVE

Open circuit voltage	(optional) ≤ 15 V
----------------------	----------------------

DIGITAL OUTPUTS

Nominal voltage	12/24 V DC (30 V max.)
Nominal current	50 mA (60 mA max.)

FAULT CURRENT MONITORING

	For grounded systems (optional)
Number of meas. channels	2 (2 measurement ranges each)
Measurement range 1 (1A)	Earth current measurement
• Measuring transformer	1/1 up to 1/1000 A
• Alarm limit	30 mA up to 1000 A
Measurement range 2 (2mA)	RCM with connection monitoring
• Measuring transformer	Residual current transformer 500/1 up to 1000/1 A
• Alarm limit	30 mA up to 1 A

TEMPERATURE INPUTS

Number of channels	(optional) 2
Measurement sensor	Pt100 / PTC; 2-wire

RELAYS

Contacts	(optional) Changeover contact
Load capacity	250 V AC, 2 A, 500 VA; 30 V DC, 2 A, 60 W

BASIC UNCERTAINTY ACCORDING IEC/EN 60688

	AM1000/2000	AM3000
Voltage, current	±0.2 %	±0.1 %
Power	±0.5 %	±0.2 %
Power factor	±0.2°	±0.1°
Frequency		±0.01 Hz
Imbalance U, I		±0.5 %
Harmonic		±0.5 %
THD U, I		±0.5 %
Active energy	Class 1	Class 0.5S (EN 62 053-22)
Reactive energy	Class 1	Class 0.5S (EN 62 053-24)

INTERFACES

ETHERNET

Physics	Standard (AM3000), optional (AM1000/AM2000)
Mode	Ethernet 100Base TX; RJ45 socket
Protocols	10/100 MBit/s, full/half duplex, autonegotiation Modbus/TCP, http, NTP (time synchronisation)

IEC61850

Physics	option
Mode	Ethernet 100Base TX; RJ45 socket, 2 ports
Protocols	10/100 MBit/s, full/half duplex, autonegotiation IEC61850, NTP

PROFINET IO

Conformance class	optional CC-B
Physics	Ethernet 100BaseTX, RJ45-Buchsen, 2 ports
Mode	10/100 Mbit/s, full/half duplex, auto-negotiation
Protocol	PROFINET, LLDP, SNMP

MODBUS/RTU

Physics	Standard (AM2000), optional (AM1000/AM3000)
Baud rate	RS-485, max. 1200 m (4000 ft) 9.6 to 115.2 kBaud

TIME REFERENCE

Internal clock	
Clock accuracy	± 2 minutes/month (15 to 30 °C)
Synchronisation	NTP server or GPS

ENVIRONMENTAL CONDITIONS, GENERAL INFORMATION

Operating temperature	without UPS: -10 up to 15 up to 30 up to + 55 °C with UPS: 0 up to 15 up to 30 up to + 35 °C
Storage temperature	Base device: -25 up to + 70 °C Battery pack UPS: -20 ... 60 °C (<1 month) -20 ... 45 °C (< 3 months) -20 ... 30 °C (< 1 year)
Temperature influence	0.5 x basic uncertainty per 10 K
Long-term drift	0.5 x basic uncertainty per year
Others	Application group II (EN 60 688)
Relative air humidity	<95 % without condensation
Operating altitude	≤2000 m above MSL
Only to be used in buildings!	

MECHANICAL PROPERTIES

Installation position	Control panel installation
Housing material	Polycarbonate (Makrolon)
Flammability class	V-0 according UL94, self-extinguishing, not dripping, free of halogen
Weight	800 g (AM2000/AM3000), 400 g (AM1000)

SAFETY

Current inputs are galvanically isolated from each other.	
Protection class	II (protective insulation, voltage inputs via protective impedance)
Pollution degree	2
Protection	IP54 (front), IP30 (housing), IP20 (terminals)
Measurement category	U: 600 V CAT III, I: 300 V CAT III

SMARTCOLLECT

SMARTCOLLECT is a data management software which can acquire measured data in an easy manner and store the same in an open MS SQL database. This software offers basic functionalities for data analysis and for easy energy monitoring as well as the easy preparation and disposal of reports.

Providing a mature graphic user interface, the SMARTCOLLECT software is clearly structured and easily operated.

SMARTCOLLECT is modularly designed and permits supplementing modules or functions at any time.

CUSTOMER BENEFITS

- Easy data communication via Modbus RTU / TCP, ECL and SmartControl-Direct
- Connection also via OPC
- Devices of Camille Bauer and Gossen Metrawatt are already predefined and selectable in the software
- Open for the devices of all manufacturers
- Data is stored in an open MS SQL database (depending on the scope Express or Server)
- Modular cost / performance model – basic version may be extended at any time

MODULAR DESIGN

COMPONENTS

The SMARTCOLLECT data management software consists of the following components:

SMARTCOLLECT CLIENT

MORE CLIENTS POSSIBLE

SQL DATABASE

SMARTCOLLECT SERVER

SMARTCOLLECT CLIENT

- Graphic visualisation of queried data
- Export via Excel file
- User interface to define the data sources to be read out as well as error and warning messages via email.

SMARTCOLLECT DATABASE

- MS SQL database (depending on the scope Express or Server)
- Contains the collected data
- Open and unencrypted

SMARTCOLLECT SERVER

- Collects and configures data from active sources and channels and writes the same directly into the central database.

SMARTCOLLECT software components may be installed on an individual system or on several servers or computers.
